Average Particle Size	0.65µ

THE DENTAL ADVISOR ++++

Alpha-Flow® is a radiopaque light cure resin-based micro-hybrid flowable composite. The specially formulated material incorporates both a Nano-sized filler for increased flexibility and superior polishability, and a 0.7 micron filler for excellent strength and wear resistance. This unique combination provides a material with extreme versatility for use in a wide range of procedures, including Class III and V cavity figurations, and small Class I and II restorations. Alpha-Flow® contains fluorescence to provide a duplication of the natural tooth surface.
